### **1. Course Description and Aims**

This course covers the microfoundations of development, examining theoretical and empirical issues applicable in less-developed country economies. Topics surveyed will include current issues, agriculture and rural development, education, human capital investment, employment and labour markets, population, poverty alleviation, health, credit and financial markets, dealing with risk, technological change and the design and evaluation of development projects. A number of empirical and case studies will be discussed in class, with students being expected to develop a comprehensive understanding of the development concepts and their application, and a familiarity with basic econometric approaches. The intended learning objectives of this unit are to develop an awareness of the central theoretical microeconomic issues in economic development; become familiar with empirical analysis and methods applicable to less developed countries; and be able to apply theoretical ideas from microeconomics to a range of key issues in developing country economies and development projects.

### **2. Method of Assessment**

Two page summary and analysis of each discussion paper (total 20%); one final examination (80%)

### **3. Required Text and References**

The course will not follow a text book chapter by chapter. A list of papers will be distributed in the first class, and handouts will be made available. The following texts are useful background references but need not be purchased for the course:
